

Description

The **AR-UNIDAT** Scale Management Software Suite is the ideal choice for handling the scales in factories, national or private railways, multinational companies and processing weighing results.

The **AR-UNIDAT** Scale Management Software Suite handles the connected scales and peripheral devices, monitors and logs the traffic events and the weighing results, provides the necessary forms and statistics for full electronic data management.

The data is stored in secured **SQL** database. Easily customizable filters are available to create basic queries and statistics. The event log is created automatically from the weighing events.

All data is stored in closed and secured files being identifiable and traceable according to the **ISO 9000** quality management. The users with operator or supervisor rights can log in to the software with dedicated username and password.

The **AR-UNIDAT** Scale Management Software Suite has an easy-to-use graphical user interface (GUI), the training, the customization and the service support is available online via remote access.

Principle of Operation:

The software provides forms in a **WYSIWYG** way (what you see is what you get). The windows appearing on the screen are identical to the printout.

The on-site peripheral devices are visualized by secondary displays in the software, allowing remote management.

Advantages:

- Intranet/OpenVPN network use
- Local and remote electronic management
- Clean graphical process visualization
- Wide range of software plugins
- Language modules
- State of the art software techniques
